Allowable Subject Matter

2. **Claims 1, 3-5,** are allowed.
3. The following is an examiner's statement of reasons for allowance:

Regarding **claim 1**, the present application teaches a handover method comprising several operations, including two operation (a or b), one of which is to be performed when a terminal moves to a new call. The factor that determines whether it is (a or b) terminal is in an idle state or an active state when it moves to a new cell as specifically mentioned on claim 1.

The closest prior art to the present application such as Choi (US Publication 2004/0198383) discloses an operation of a system including a mobile node that moves between areas controlled by various stations (home agent, paging foreign agent, and controlling foreign agent), but the interactions between Choi's entities are unlike the operations required by the present application claim. Choi teaches registering location information of the mobile node to a paging foreign agent when the mobile node moves to a new cell, while the paging foreign registers the location information with controlling foreign agent only if the mobile node is active. Choi fails to teach

performing an IP acquisition through an IP registration according to a IP mobile when a terminal in an idle states moves to a new cell, and transmitting traffic to a new AS (access station) from a previous AS without performing an IP modification and registration process when a terminal in an active state to a new cell as specifically mentioned on claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
